## Easy to Install

**CHOOSE A SITE FOR YOUR DRIER**  
Allow a clearance of 0.6m more than the rotating diameter.  
Remove the socket from the arm of the drier.

**INSTALLING IN CONCRETE USING THE SOCKET PROVIDED**

**GRAVEL    SAND    CEMENT**

You will need a minimum of 0.017 cu.m of concrete in the following proportions:  
3 parts gravel, 2 parts sand, 1 part cement

200mm    450mm

Dig a hole 200mm diameter by 450mm deep. Partly fill the hole with concrete leaving an available depth of 150mm. Position the socket centrally in the hole ensuring that the rim is at ground level. Add a further 60mm of concrete around the socket to locate it in position. Replace the drier in the socket and hold it vertically while filling the hole around the socket with concrete. Gently remove the drier ensuring that the socket remains vertical and finish the surface with fine cement.

**OPTIONAL ROTASPIKE INSTALLATION**

Install directly into the soil using a 32mm Rotaspike. Not suitable for loose topsoil.

Simply hammer the Rotaspike in VERTICALLY using a wooden 'dolly' to protect it.

**EASY TO USE**

Insert the drier into the socket or spike.

Splay the arms out to release them.

Grasp the lower cross piece and push upwards.

Twist handgrip to lock the retaining pin into top slot.

**The drier is now ready to use**
